

FGM TURNKEY SOLUTIONS FOR THE HORTICULTURE & MANUFACTURING INDUSTRIES

FGM.DK

Welcome to FGM-AdeptAg

FGM A/S was founded in 1979 specializing in service, parts, and equipment for the Danish horticulture industry. We make and install all types of machinery - from small machines to large fully automated solutions.

Our extensive experience with automation makes us a good and serious collaborator to solve your next project, and it makes us fully capable of delivering the very best parts and services for the general industry.

FGM-AdeptAg: local sales and service in the USA

AdeptAg's partnership with FGM's Moving Gutter Systems (MGS) allows us to provide the most comprehensive solution on the market - along with unmatched service and maintenance throughout the system's lifecycle. No other provider can offer this level of support today.

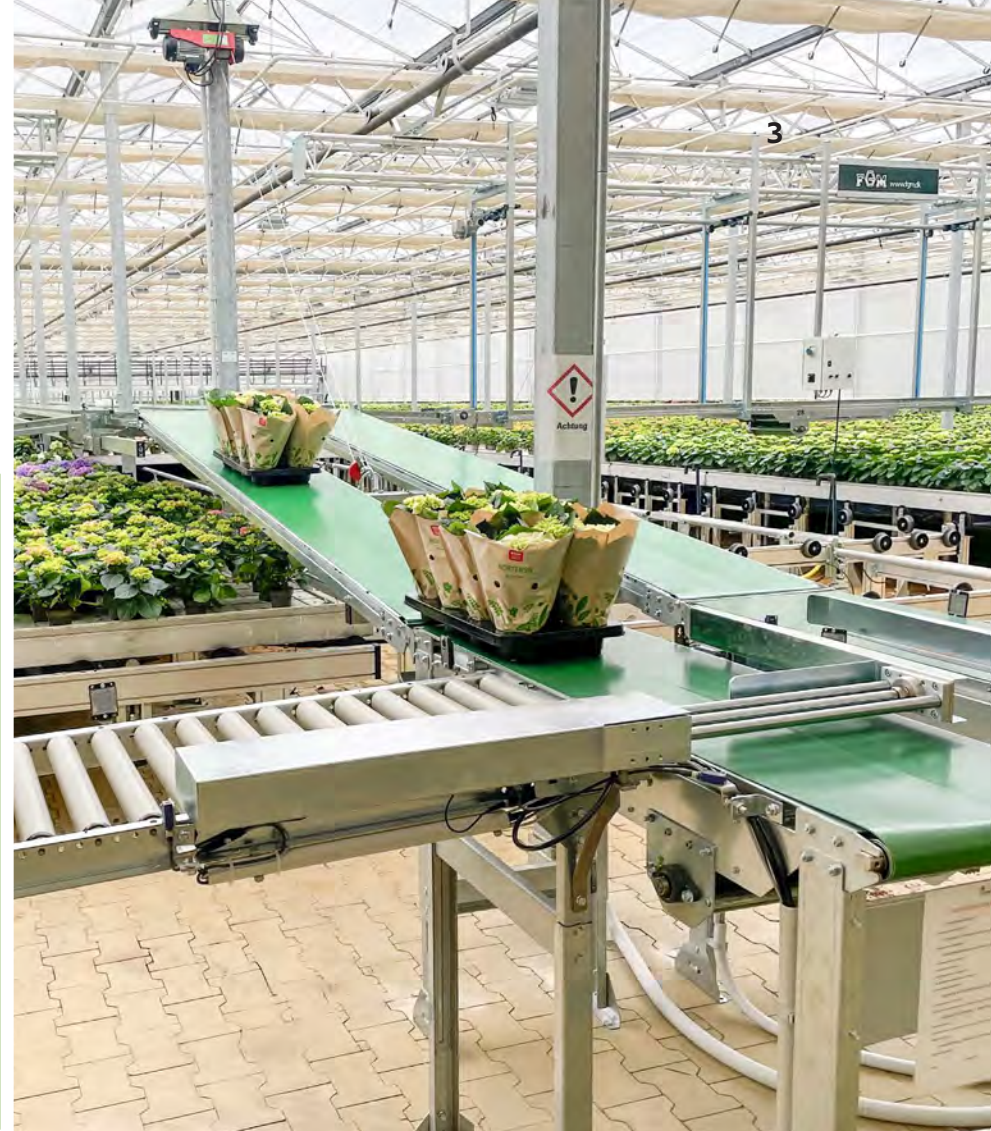

Many current users of moving gutter systems lack a North American-based service team and must rely on remote support from overseas providers. When a grower invests in an FGM system from AdeptAg, they can trust that we will be there on-site whenever service is needed.

Why Choose FGM-AdeptAg?

- **Fast delivery** - from order to installation.
- **In-house engineering teams** - based in both Denmark and the USA.
- **Sales and service** - for irrigation, water treatment, seeding, propagation, transplanting, and harvesting equipment.
- **Dedicated project support** - our sales team follows the project from inception to full production and ensures after-sales service.
- **Customized solutions** - we adapt our design and manufacturing to meet unique customer needs.
- **Seamless integration** - our systems can be incorporated into existing operations.
- **Service agreements available** - ensuring long-term performance and reliability.

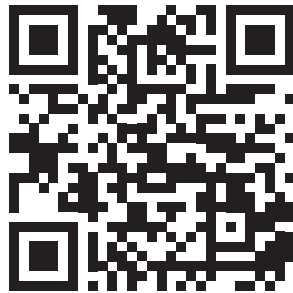

A Partnership You Can Trust.

With AdeptAg's local expertise and FGM's MGS technology, you gain access to a unique solution. From system design and installation to ongoing maintenance and support, AdeptAg ensures that your investment delivers long-term value.

FGM MANUFACTURED CONVEYOR BELTS

Scan the QR code and
read more about belts
on our website.

FGM A/S delivers a wide assortment of domestic and international transportation. We offer the following:

- Belts with sides for transportation of materials
- Belts with rises
- Narrow belts down to 12 cm.
- Roller conveyors in all breads
- Roller conveyors motorized or manual
- Belts with wheels
- Belts in all breads up to 2 m.
- Belts with lamellas

VERTICAL FARMING

Vertical farming is a new production method for horticulture and other industries where the production is taking place in several layers, it can be in mobile tables or in our gutter line system (moving gutters system) depending on which is desired.

Depending on the type of production using either mobile tables or gutters, we can offer different solutions with irrigation and all technical equipment.

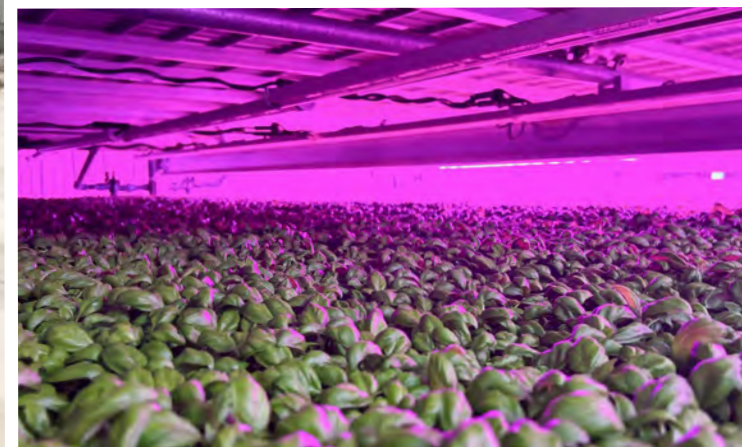

Let FGM A/S propose an offer for your next project.

We work with small as well as large contracts - without compromising on quality.

We offer references on projects - that we have carried out - on the following pages.

AUTOMATIC GUTTER SYSTEM

The automatic NFT Gutter System (MGS) is made of high-quality materials, with construction in galvanized steel and frames robust enough for hanging the heating pipes from our frame undercarriage. FGM also offers stainless steel frame options as well.

The Gutter System is produced per our client's design needs, along with FGM automatic inlet boom, gutter washing machines, and trolleys can be added.
