

## Machine Description

The IM1800 is designed to optimize productivity, with production rates of 350-500 containers per hour, depending on the container size and the desired level of soil compaction. Its efficient design makes it an ideal choice for various horticultural operations. One of the standout features of the IM1800 is its ease of use; the height of the hopper and the drop-down side panel facilitate easy soil loading, minimizing the physical effort required from operators. This user-friendly design ensures smooth and efficient operation, reducing downtime and enhancing overall productivity.

## Features

- Vibrating potting bench
- Hinged hopper side panel
- Single and double discharge potting chute
- Hands-free soil elevator controls
- Built-in fork pockets
- Powered soil return belt

Specifications:	
Pot Size	Up to 16" diameter and 12.5" height
Production Speed	Up to 500 pots per hour
Electrical Requirements	220VAC, 12 Amps, Single phase
Hopper Capacity	2.3 Yards
