

Boom Irrigation

Even watering across your operation.

ONE PLATFORM, THREE CONFIGURATIONS

Whatever your house looks like, there is a boom that fits it, and waters the crop the same way every pass.

THE BOOM LINEUP

Dual Rail

The cost-effective workhorse for gutter-connected and freestanding houses, on two center rails.

UP TO 42 FT SPAN · UP TO 500 FT TRAVEL

Tower

Rides rails fixed to post rows, supported at both ends. Ideal when the roof center holds baskets.

E-CHAIN OR VERTICAL HOSE

Gantry

Spans the full bay on existing posts. Frees up walking paths for more growing space, and rides over the crop.

UP TO 3,000 LB PAYLOAD

DOES THIS SOUND LIKE YOUR OPERATION?

- › Hand-watering 4-inch product takes hours, and hours cost money.

- › A greenhouse built over generations rarely fits a single watering solution.

- › Growth applications administered by hand results in uneven crops.

Ready to bring **even watering** to every crop, with less hand labor?

Match the Boom to Your House

The hose management and controls that run your booms.

MATCH THE HOSE MANAGEMENT TO YOUR RUNS

E-Chain FOR HIGH-FREQUENCY RUNS

A chain track guides the hose through many cycles a day, off the crop. The right fit for **propagation houses** and other high-run operations.

Vertical Hose FOR LOW AND SLOW IRRIGATION

A simpler, lower-cost **center fed** overhead loop for standard boom configurations.

THE CONTROLS THAT RUN THEM

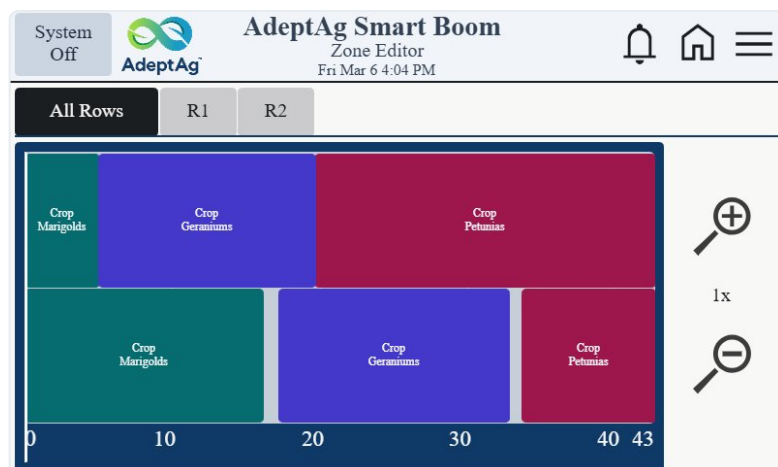

Smart Boom Controller CONNECTED CONTROL FOR MODERN OPERATIONS

A visual touchscreen operators learn in minutes, with auto-correcting tracking so **the boom always knows where it is** and built-in **AdeptAg+ connectivity**. Fits dual rail, tower, and gantry booms from any maker.

Simple Rain Controller WHEN SIMPLE IS ALL YOU NEED

A single-zone platform for DC-motor booms with manual switches and simple speed control. Common in **tree seedling** and **field vegetable** production.

A LOOK AT THE CONTROLS

Let's match the right **boom** to how your house is built and what you grow.
